## Pseudocode writing

NAME:- R. JANANI SRI

Reg no:- 192511093

Course:- Data  
Structures

Code:- CSA0307

### 1. Shortest path with "Toll free" Voucher

#### Problem:-

A graph contains edges with different weight (tolls). We have one Voucher that can make the cost of one edge Zero. Find the minimum cost path from source S to destination D

#### Pseudocode:-

Shortest path (G, S, D):

for every vertex v:

~~dist[v][0] = ∞~~

~~dist[v][1] = ∞~~

dist[S][0] = 0

Create Priority queue PQ

Insert (0, S, 0) into PQ

while PQ is not empty:

(cost, u, used) = Remove

minimum from PQ

for each edge  $(u, v, w)$ :

$$\text{newcost} = \text{cost} + w$$

if  $\text{newcost} < \text{dist}[v]$

[used]:

$$\text{dist}[v][\text{used}] = \text{newcost}$$

Insert  $(\text{newcost}, v, \text{used})$  into PQ

if  $\text{used} == 0$ :

$$\text{newcost} = \text{cost}$$

if  $\text{newcost} < \text{dist}[v]$

$$\text{dist}[v][1] = \text{newcost}$$

Insert  $(\text{newcost}, v, 1)$  into PQ

return  $\min(\text{dist}[D][0], \text{dist}[D][1])$

Suppose:-

$S \xrightarrow{5} A \xrightarrow{10} D$

$S \xrightarrow{8} B \xrightarrow{2} D$

Without voucher

$$S \rightarrow A \rightarrow D = 5 + 10 = 15$$

$$S \rightarrow B \rightarrow D = 8 + 2 = 10$$

Using the voucher on the edge  $S \rightarrow B$ :

$$S \rightarrow B \rightarrow D = 0 + 2 = 2$$

Shortest path = 2

Time Complexity :  $O((V+E) \log V)$

## 2.7 Detecting "Critical Dependencies"

Problem:-

In a task graph, Vertices represent tasks and directed edges represent dependencies

Topological Sort Pseudocode:-

Topological Sort ( $G$ ):

Find indegree of every vertex

$Q$  = empty queue

for each vertex  $v$ :

if indegree  $[v] == 0$ :

Insert  $v$  into  $Q$

Order = empty list

while  $Q$  is not empty:

$u$  = Remove from  $Q$

Add  $u$  to Order

for each neighbour  $v$  of  $u$ :

indegree  $[v]--$

if indegree  $[v] == 0$ :

Insert  $v$  into  $Q$

return Order.

Example

$A \rightarrow B$

$A \rightarrow C$

$B \rightarrow C$

$C \rightarrow D$

Possible topologies

$A, B, C, D$
